

Starting Anthropac - Windows operating systems prior to Windows 7

1. Double-click on the application file or shortcut for APX.EXE, located in C:\APAC\
2. Change directory to where the data files are stored

DOS menu → CD → enter full path to the folder containing the data file(s)

For example:

Starting Anthropac – Windows 7 or higher operating systems

1. Visit the following tutorial to install and get started with a DOS emulator:

<http://www.qualquant.net/files/images/Final%20APAC%20with%20Dosbox%20Install.mp4>

2. Change directory to where the data files are stored

DOS menu → CD → enter name of folder containing the data file(s)

For the practice exercises found in this site:

Free list data were stored in a folder called "1Free"

Pile sort data were stored in a folder called "2Pile"

You will see the “input dataset” path to one or the other of these folders in the various screenshots, but you do not need to name your own folders containing data files in this way.

If you decide to store your practice data files in separate folders, remember to change the directory each time you need to switch between data folders.
