

## **FLAME Installation**

### **To Download:**

Visit: <http://www.mae.u-paris10.fr/lesc/spip.php?rubrique75>

And click on the link: “télécharger FLAME” near the middle of the page.

This will download a folder titled “FLAME\_v1\_1”

### **To run FLAME:**

Option 1: Open the macro-enabled MS Excel Workbook by clicking the “Flame\_v1.1.xla” file. You can run all procedures directly on this Workbook. However, anytime you want to use FLAME you will have to find and open this file.

Options 2: Install FLAME as an Add-in. This will make the Workbook permanently available within Excel each time you open Excel.

To install the FLAME Workbook as an Add-in:

- WINDOWS OS Go to:
  - For Office 2007 or later: “userfolder”\Application Data\Microsoft\AddIns
  - OR For XP:  
C:\Documents and Settings\[UserName]\Application Data\Microsoft\AddIns
  - OR for Windows Vista: C:\Users\[Userame]\AppData\Roaming\Microsoft\Addins
- MAC OS Go to:
  - Applications\Microsoft Office [version]\Office\Add-ins
- Copy / Paste the “Flame\_v1\_1.xla” file into the Add-ins folder. Here’s where to find the folder:
- WINDOWS OS: Open MS Excel, and follow these steps:
  - For Excel 2003 and higher: Go to Tools>Add-ins. The FLAME Add-in should appear as an option on the list if you have placed it in the correct folder. Select the FLAME Add-in and then click OK.
  - OR for later versions of Office: Go to the Office icon at top left of MS Excel, then go to Options or Excel Options. Next click on Add-ins, then select Excel Add-ins from the Manage dropdown menu, click Go and Ok to close the window.
  - You may find that you will need to close Excel and re-open to see the FLAME Add-in.
- MAC OS: Open MS Excel and follow these steps:
  - Go to Tools > Add-ins. The FLAME Add-in should appear as an option. Select it and click OK.
- After following these steps, FLAME should appear as a tab at the very top in the Excel ribbon. The tab may be titled “Add-ins” or directly “FLAME\_V1” in WINDOWS OS or as “Flame.v1.1” in MAC OS.
